Introduction

What does it do?

This extension forces htmlArea RTE to automatically paste the clipboard content as plain text.

It basically adds an event handler that fires when something is going to be pasted. If the clipboard content cannot be retrieved by the script (e.g. because of the browser's security settings or if the browser does not support direct access to the clipboard contents), a layer containing a textarea will be opened. After pasting to this textarea the text is being inserted at the current caret position.

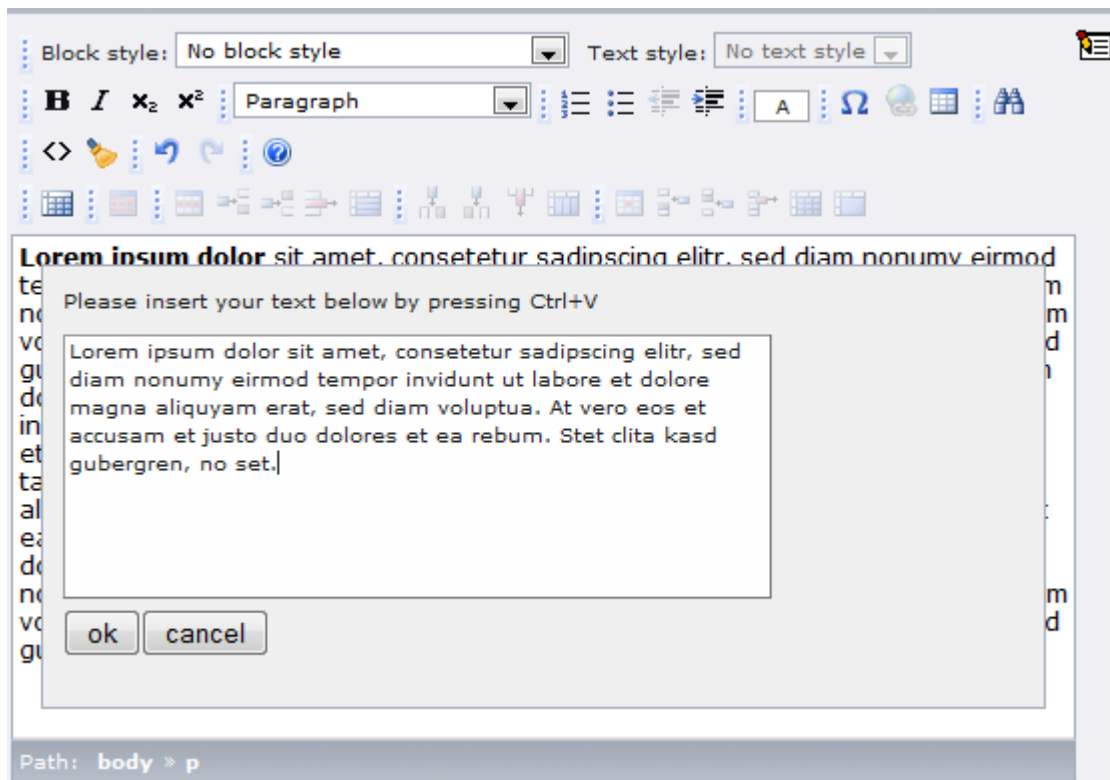

So far tested and working in

- Firefox 3.0+
- Internet Explorer 6+
- Google Chrome 2.0+

Please report all bugs!

Screenshots

This is what it looks like when the textarea is needed: (e.g. in Firefox)

Known problems

Browser compatibility issues:

- Does not work with Safari (tested with version 4)
- Does not work with Opera (tested with version 10)

To-Do list

- add compatibility for other browsers

ChangeLog

- 28.05.2010
 - replaced popup window by a css layer
 - added support for multiple RTE's in one TCEform
- 17.10.2010
 - compatibility fixes for Typo3 version 4.4
